

XP780

VSM CERAMICS Plus

Grain type	Ceramic
Bonding	Full-resin bonded
Colour	Red-brown
Backing	F-Paper
Production width	1,450 mm

Materials

Features

XP780 combines the aggressiveness of the microcrystalline ceramic grain with a heavy, low-stretch paper backing. The optimised self-sharpening effect enables high cutting performance for rough work, such as the deburring of heavy plates, laser parts and punched parts. Suitable for long belt and wide belt applications with medium contact pressure.

Grit range:¹⁾

Benefits

- > Optimised self-sharpening effect results in an extremely high stock removal rate thanks to constant recreation of sharp grain points
- > Increase in efficiency when applying medium contact pressure against wide and long belts
- > Good flatness thanks to heavy paper backing

Wear pattern of the grain

Due to their optimised and thus finer microcrystalline structure, **VSM CERAMICS Plus** series feature an improved self-sharpening effect, which produces much more sharper edges
